Custom-tailored success

FASSE FILTERS

They extract more for your money

Founded as an industrial stitching company in 1964, the FASSE Industrietextilien GmbH now rates among the most innovative manufacturers and leading full-package providers in the area of filter technologies. Competent consultancy, uncompromising quality and on-schedule delivery 100% of the time make us a highly valued partner – for enterprises and the environment alike.

“A good-enough fit” doesn’t suit us at all

... and we don’t satisfy ourselves with “can’t-be-dones”: FASSE Filters are custom-manufactured with highest precision – in accordance with designs, customer specifications and parameters defined on-site. This way you can be sure to get exactly the product you asked for. Individually designed for your application. Look for uniform goods elsewhere.

Quality – higher than its price

High-quality materials and state-of-the-art processing technology make our filters as valuable as they are cost-efficient. Whether they are stitched, welded or glued, two things always go into making them: know-how and the experience of our employees. No wonder some enterprises have been our customers for over 40 years.

Always quick but never on the quick

We don’t disappear at the end of the production process. Assembly, maintenance and disassembly are just as much a part of the services we offer as are physical, chemical and optical analyses. And in the case of a breakdown, our hotline, on-the-spot manufacturing and immediate delivery reduce reaction and down time.

NO MORE FUSS ABOUT DUST

F i l t r a t i o n s y s t e m s w h i c h p a y o f f

So nothing takes an airing

Good advise at the very start

Do you raise lots of dust at your enterprise too? That needn't be. FASSE has fresh ideas for clean air.

In the course of process-technical consultation we determine the ideal filter medium and design for your own specific conditions of use. We make decisions about materials and accessories in precise correspondence to mechanical, physical and chemical strain which will win you over with impressive price vs. performance.

We focus on inner values

The perfect product takes center stage

Not until all components of a filter harmonize completely can it achieve optimal performance in terms of efficiency, lifetime and profitability. Filter media by FASSE are the perfect choice.

We manufacture filter envelopes and hoses in every design and dimension – suitable for all dedusting and fastening systems. Whether you want single-unit, small-series or high-volume production, the entire range of fibers and fittings available on the market is at your disposal. And that includes filter cages, snap rings, frames and other fittings.

Filter media for vibratory and reverse flow dedusting

For example with a loop jacket for bar suspension as well as bell or lid suspension on top and cutting edge, jacket, string jacket or snap ring at the bottom. Matching accessories such as bells, band clamp fittings and spring suspensions are included in the package.

Filter envelopes for all types of dedusting

With sewn-in cord, a sewn-on felt gasket ring or oval snap rings suitable for all filter systems.

Multi envelopes for all types of dedusting

Made of woven fabric, non-wovens and needle felt with frames glued or sewn in. Ready to install with inserted wire or foam spacers.

Filter hoses for filters with pulse-jet dedusting

With snap ring and double-beaded gaskets, steel ring or felt gasket at the head for the seal on the perforated plate. FASSE Industrietextilien also supplies matching filter cages, pressurized air tanks, valves, replacement parts and other accessories.

A NEAT AFFAIR

W h a t r e m a i n s : s a t i s f i e d c u s t o m e r s

Our recipe for customer loyalty is simple: quality. We guarantee it through consistent implementation of our internal quality management system and constant control by independent testing institutes.

For this reason more and more renowned plant construction firms and operators are using our products successfully. For example in the following sectors:

- **Foodstuffs and animal feed Industries**
- **Chemical and pharmaceutical Industries**
- **Power plants and energy technology**
- **Wood and metal processing**
- **Metallurgy (for ex. steelworks and foundries)**
- **Cement works, non-metallic minerals**
- **Waste incineration plants**
- **Recycling and conditioning**

USBAGs

So nothing gets lost

Whoever uses filters must also dispose of filter dust. To make storing and transporting it more economic – and because service from one source is always the best – we have manufactured FiBCs (Big Bags) since 1985 under the brand name USBAGs. This flexible type of container is the ideal logistics solution for all bulk goods.

We take the “pre” out of manufactured

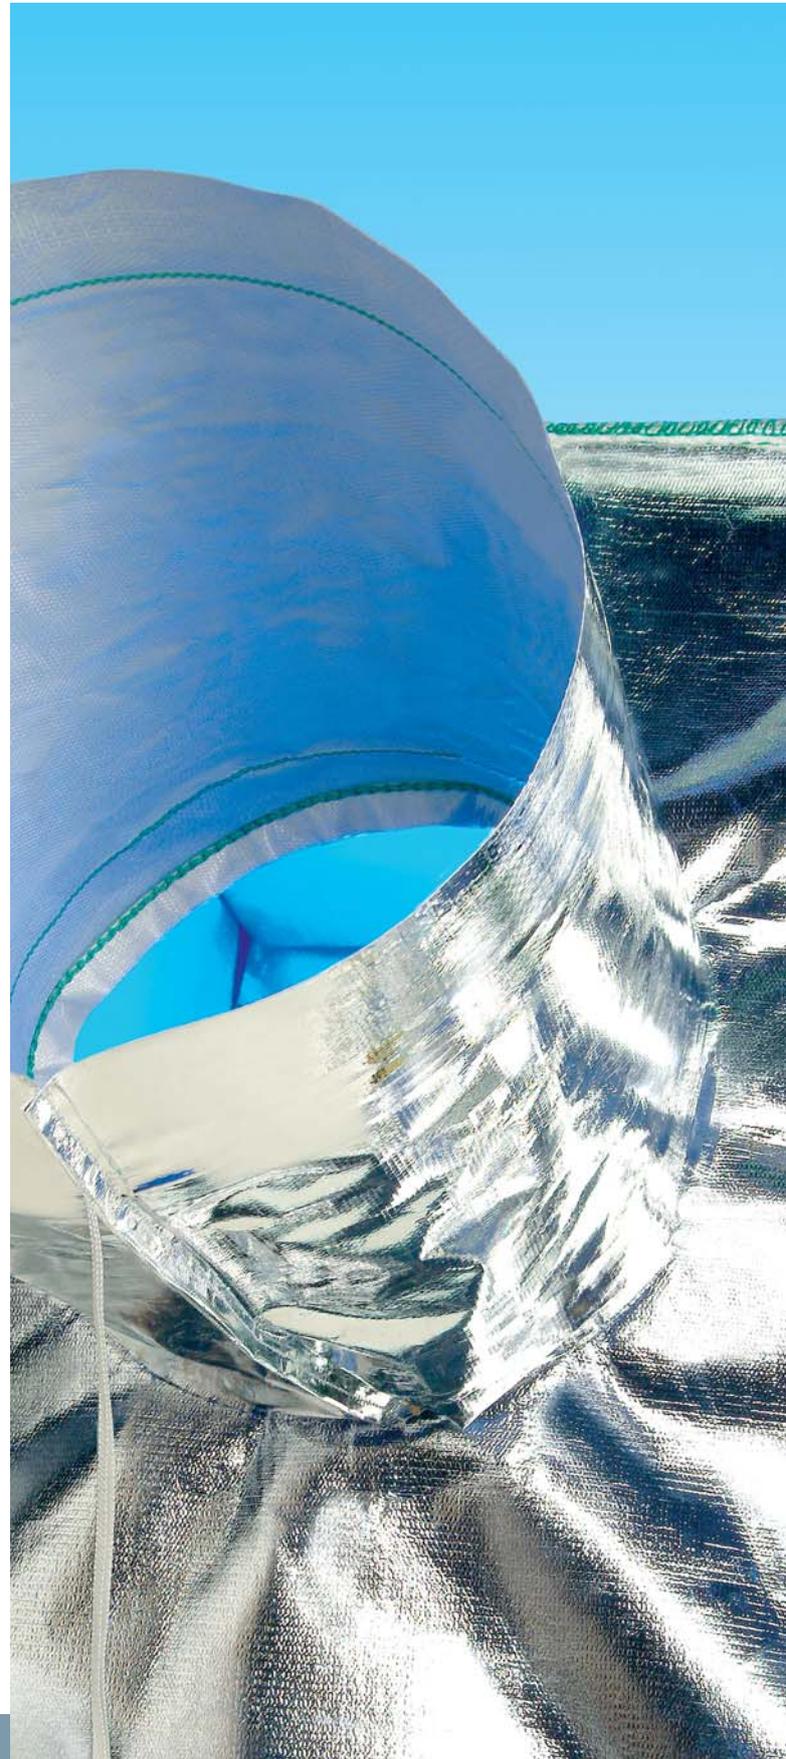

FiBCs are produced by us, not imported. Few German enterprises can make this claim. Instead of off-the-shelf products you get custom-tailored bulk goods containers which optimally match your needs – highest quality at absolutely competitive prices

We take the dread out of deadlines

With our wide range of standard sizes in countless designs we fulfill customers' wishes on an extremely short-term basis. Thanks to flexible production capacities we don't burst at the seams when urgent orders come in or stitch them together hastily.

We are big on small quantities too

For us, “need-based” refers to number of units as well. There is no such thing as a minimum order. If you only require ten FiBCs, that's what you'll get (several thousand too, of course). And should you desire an individual sample for operational testing – no problem there either.

WITH US YOU CAN POCKET EVERYTHING

Flexible bulk goods containers made to measure

Bigger. Better. USBAGs.

Simply practical

USBAGs are a wise choice. We manufacture custom-tailored FiBCs with professional expertise, drawing on years of experience in this industrial sector. The result? Containers ideally suited for easy filling, space-saving storage, metered draining and economic transport of bulk goods and free-flowing filtrates. For taxing work made easy – completely dust-free and without loss of material.

All-inclusive. Clear to go.

Surprisingly versatile

The right product line for any demand; for any problem the suitable special solution. Whether you opt for the economic basic version for free-flowing substances, a version with a sewn gasket seal for fine particulates or aluminum or PE lining for protection against environmental influences, as far as material, dimensions and fittings go, USBAGs are only beholden to

one benchmark: their application. Thus you can wrap things up and rest easy.

Leakproof it is!

Something you can count on

Good to know for sure: USBAGs are subjected to ongoing quality control by independent testing institutes. The FiBCs tested in accordance with DIN EN 21898, which boast up to eight-fold load-bearing capacity (SF 8:1), meet

even the toughest demands. Our quality assurance program is accredited by the Federal Institute for Materials Research and Testing (BAM). UN-FiBCs comply with regulations on carriage of dangerous goods on road and rail. No matter what you entrust to our FiBCs, at FASSE Industrie-textilien you can be sure nothing will leak out.

Standard FiBCs

In basic dimensions ranging from 70 cm to 125 cm available in any height. Open on the top with a skirt or a filling spout. Closed on the bottom, with double base or faucet. 1-point, 2-point, 4-point or 2-canal suspension.

Foodstuff FiBCs

Made of neutral-to-taste and odorless pure polypropylene fabric. Also available with PE-HD-, OPP/PA/PE- or aluminum bond lining. The tissue and lining comply with LmBG (German Food and Commodity Goods Law). FDA (Food and Drug Administration) regulations are also adhered to.

FiBCs for ex-protected areas

Made of conductive tissue, threads and belts. Maximum operational safety is ensured. Of course also available in UN design for hazardous materials.

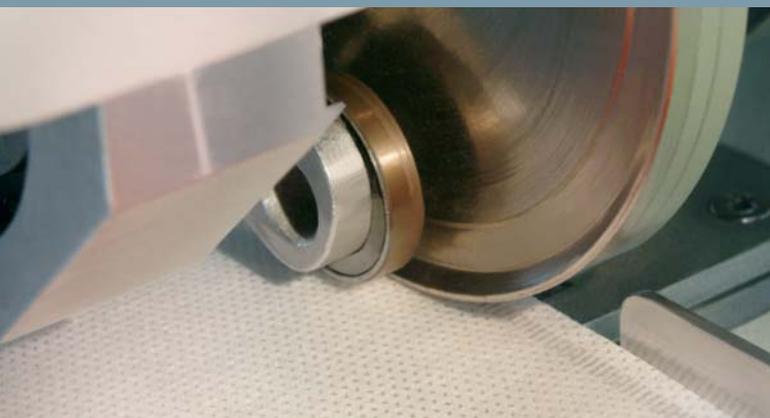

Special issue FiBCs

For example, filter FiBCs made of sieve fabric, multi-layer or membrane fabrics. Thus a product in the FiBC can react with the gas flowing through. Of course also available in electrically conductive design or in compliance with LmBG (German Food and Commodity Goods Law).

WE CAN CUT IT

On-site service

FASE Industrietextilien is also on the job for you beyond its plant gates. We provide consultancy for users when FiBCs are introduced into operating processes, scrutinize material flow concepts and electrostatic conditions under which FiBCs are handled and are at

hand when problems arise in the course of filling and emptying tasks.

With service like this, word gets around. Not only among customers who buy our filter products but also among numerous enterprises which store bulk goods ready for transport such as pellets and granulates.

OUR PLACE OR YOURS?

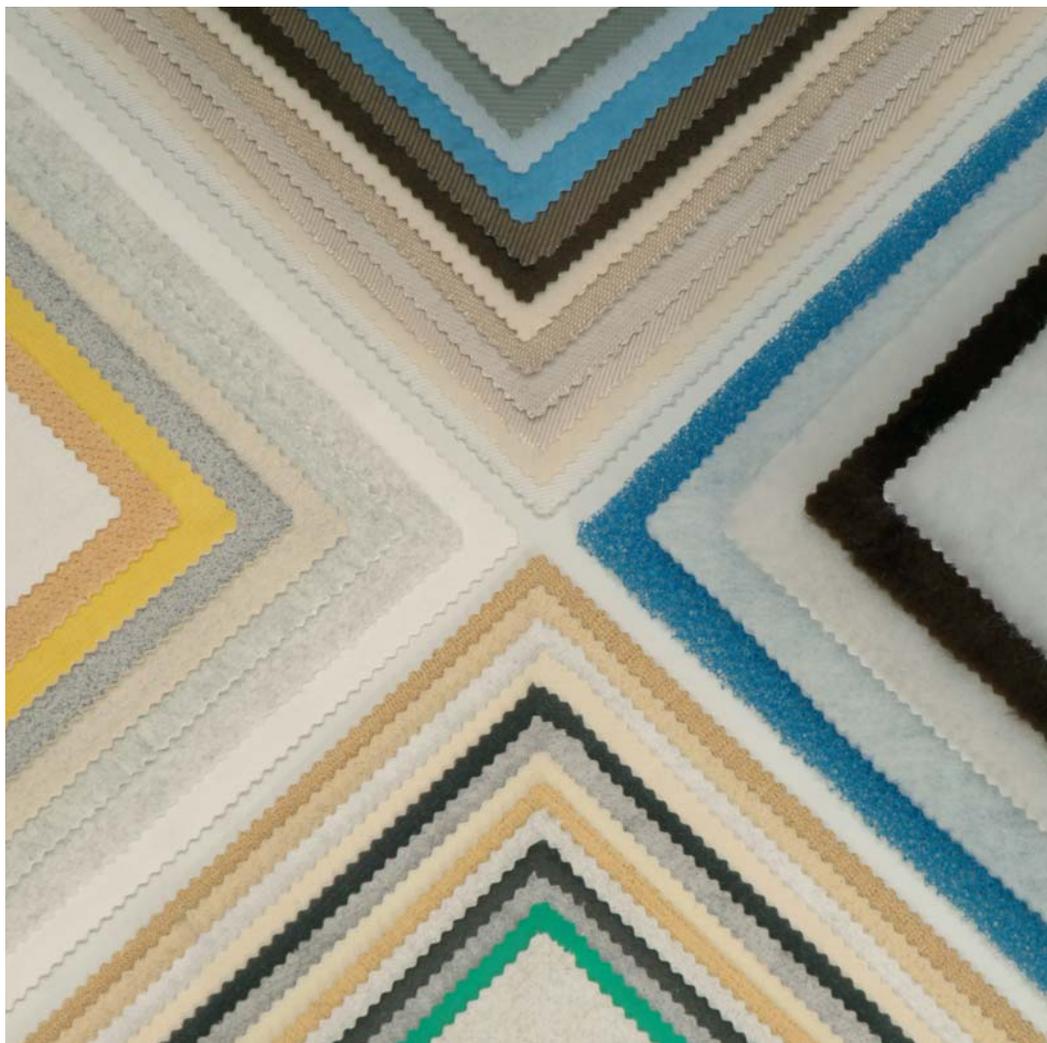

On location in the heart of Germany

Right in the middle of Germany lies the production site of FASSE Industrietextilien GmbH, readily accessible by car and public transport. From here our customers in Germany, Europe and other locations all around the globe are within easy reach. And should you want to visit us in picturesque Solling, we invite you to drop in for a good cup of "filter coffee."

We have other talents as well

We have not forgotten our roots as an industrial stitching company. What connects our product groups FASSE-FILTER and USBAGs is still the perfect seam. For this reason we also sew tents, awnings, sails, bags and much more. Thanks to our state-of-the-art machine park, in a flash at incredibly attractive prices.
